

Elegant Chrome Logo

Free AE template from www.marco-belli.com

Customize it is very fast and easy: you have just to import your logo into the project and place it in the center of the composition called "YOUR LOGO".

After that, go to the "master composition" and open the effect controls of the first layer (panel control); here you can choose if enable or not the dark mode and the fade to black dissolve using the corresponding checkbox.

Now, add the master composition to the render queue and launch the render. That's all.
