# Inspired moments

after Effects CS5 template

Follow these easy steps to customize this template:

- Open the project
- Import all your media (15 placeholders)
- Go to the "your placeholders here" folder
- Open "Placeholder 1" composition, delete the existing placeholder image and place your video or image
- Repeat this job for each "placeholder .." composition
- Open the folder called "Scenes"
- You can immediately see the animation of your first placeholder; In every scene there are 3 layers with yellow label. The first two layers are the texts that you have to customize, the third layer controls their position, so select it and move it in the position that you prefer.
- Open the effects control of the layer called "flares", on "color balance (HLS)" effect, change the value of Hue, lightness and saturation to achieve your desired flare tint
- This operation is the same for all scenes except for the scene 12
- Come back to "your placeholders here" folder and open "your logo here" composition
- Delete the envato logo and place your logo
- Open "Final Composition (to render)" and add it to the render queue
- Launch the render

That's all!
